PAIN MANAGEMENT - 50 IMPORTANT EXAM MCQs

Based on the uploaded Pain Management PPT. Correct answers are marked with ✓.

1. Pain management in radiology uses imaging and interventional procedures to
✓ **Diagnose, treat and alleviate pain**

2. A common imaging modality used in pain management is
✓ **Ultrasound**

3. Fluoroscopy is used in pain management for
✓ **Imaging guidance**

4. CT stands for
✓ **Computed Tomography**

5. Imaging helps doctors identify
✓ **Exact location of pain source**

6. Nerve blocks are used to
✓ **Reduce pain**

7. Joint injections help
✓ **Relieve joint pain**

8. Pain management procedures aim to improve
✓ **Quality of life**

9. Neuropathic pain is caused by
✓ **Nerve damage**

10. Post-herpetic neuralgia is a type of
✓ **Neuropathic pain**

11. Diabetic neuropathy is treated with
✓ **Ultrasound-guided nerve blocks**

12. Osteoarthritis causes
✓ **Joint pain**

13. Rheumatoid arthritis is an indication for
✓ **Steroid injection**

14. Bursitis commonly causes
✓ **Joint pain**

15. Tendinopathy affects
✓ **Tendons**

16. Rotator cuff tendinopathy can be treated by
✓ **Ultrasound-guided injection**

17. Achilles tendinopathy involves
✓ **Achilles tendon**

18. Myofascial pain syndrome may require
✓ **Trigger point injections**

19. Spinal pain may be treated with
✓ **Epidural steroid injection**

20. Facet joint injections are used for
✓ **Chronic back pain**

21. Post-surgical pain can be managed with
✓ **Ultrasound-guided blocks**

22. Sports injuries include
✓ **Muscle strains and ligament sprains**

23. Cancer-related pain may result from
✓ **Tumors or treatment effects**

24. Infection at injection site is a
✓ **Contraindication**

25. Drug allergy is a contraindication due to
✓ **Risk of reaction**

26. Bleeding disorders increase risk of
✓ **Bleeding**

27. Blood-thinning medications increase
✓ **Hemorrhage risk**

28. Uncontrolled diabetes increases risk of
✓ **Infection**

29. Severe obesity may make
✓ **Ultrasound visualization difficult**

30. Patient refusal is a
✓ **Contraindication**

31. Anatomical variations may make
✓ **Needle placement unsafe**

32. Pregnancy may require
✓ **Procedure avoidance in some cases**

33. Ultrasound guidance allows
✓ **Real-time needle visualization**

34. An advantage of ultrasound is
✓ **No ionizing radiation**

35. Dynamic assessment means
✓ **Real-time structure evaluation**

36. Ultrasound-guided procedures are
✓ **Minimally invasive**

37. Informed consent should be obtained
✓ **Before procedure**

38. Patient positioning depends on
✓ **Area being treated**

39. Gel is applied to
✓ **Improve image quality**

40. Gel removes
✓ **Air between probe and skin**

41. Initial scanning visualizes
✓ **Nerves, muscles, joints and tendons**

42. Target structures should be
✓ **Identified before injection**

43. Needle preparation includes
✓ **Loading medication**

44. Common medications include
✓ **Anesthetics and corticosteroids**

45. Needle insertion is performed under
✓ **Continuous ultrasound guidance**

46. Needle placement is confirmed by
✓ **Visualizing needle tip**

47. Medication should be injected
✓ **Slowly**

48. During injection monitor for
✓ **Immediate adverse reactions**

49. After injection the needle should be
✓ **Carefully withdrawn**

50. Post-procedure patient monitoring is done to detect
✓ **Immediate complications**
